

AYAN PAL

Java Full Stack Developer (Java | Spring Boot | Microservices | React)

Kandi, Bazar Road, Murshidabad, West Bengal, 742137 | +91-8250982427 | palayan789@gmail.com | linkedin.com/in/ayan-pal-00067b1b6 | github.com/latecoder10

PROFESSIONAL SUMMARY

Java Full Stack Developer with 2+ years of experience designing and building distributed microservices, RESTful APIs, and full-stack web applications using Java, Spring Boot, and React. Proven experience architecting a distributed, multi-threaded Java microservices system for large-scale medical imaging data across AWS, Azure, and Google Cloud, and building a Spring Boot/JWT-secured social media platform with a React frontend. Skilled in REST API design, JWT authentication, relational and NoSQL databases, Redis caching, containerization with Docker/Kubernetes, and CI/CD automation with GitHub Actions. Also brings hands-on exposure to Python and AI/LLM-based backend development, adding a broader engineering perspective to Java-centric enterprise systems. Strong track record of Agile, Git-based collaborative delivery and production issue resolution.

TECHNICAL SKILLS

Core Java: Java (Core & Advanced), OOP, Collections Framework, Multithreading, Exception Handling, Concurrency

Backend Development: Spring Boot, REST API Design, JWT Authentication, Microservices Architecture, Node.js, Express.js, Flask

Frontend Development: React, Next.js, React Native, Redux, Material UI, JavaScript, TypeScript

Databases & Caching: MySQL, PostgreSQL, MongoDB, Redis, SQL, Database Design

Cloud & DevOps: AWS (S3, ECS, Health Imaging), Azure (Blob Storage, DICOM Services), GCP (GCS, Healthcare API), Docker, Kubernetes, GitHub Actions, CI/CD

Monitoring & Observability: Prometheus, Grafana

Testing & Quality: JUnit, Mockito, Jest, Python unittest/Mock, SonarQube

AI & Emerging Tech: LangChain, RAG, ChromaDB, LLM Orchestration

Tools & Practices: Git, Jira, Agile/Scrum, Microservices, CI/CD, Distributed Systems

PROFESSIONAL EXPERIENCE

Full Stack Developer – AI Product Engineering

Apr 2026 – Present

Estuate Inc. – Internal Product (QodeAI)

Bangalore, India

- Architected and built QodeAI, an AI-powered SDLC automation platform that converts requirements documents into BRDs, Jira tickets, sprint plans, wireframes, and HLD/LLD artifacts — designed largely single-handedly, including backend architecture, database schema, automated test suite, and code-quality gates using SonarQube.
- Built a multi-provider LLM orchestration layer with automatic per-provider API key rotation and quota-aware cooldowns, failing over across multiple LLM providers for uninterrupted operation.
- Built a RAG-based AI chat assistant using vector search with a multi-provider embedding pipeline for semantic search across generated project documents.
- Implemented JWT authentication with access/refresh token rotation and per-workspace data isolation for greenfield and brownfield project workflows; presented the platform in live demos to 2 prospective enterprise clients.

Full Stack Developer — Client: Lumberfi

Oct 2025 – Apr 2026

Estuate Inc.

Bangalore, India

- Developed and enhanced SaaS web application features using React, Material UI, and REST APIs for employee onboarding, document management, and workflow processes.
- Built reusable UI components and integrated frontend with backend REST APIs to support onboarding, document delivery, and task assignment workflows; contributed to a companion Timesheet mobile app.
- Wrote Jest unit tests to strengthen frontend component reliability and reduce regression risk.
- Deployed applications via Docker/Kubernetes with GitHub Actions CI/CD pipelines and Prometheus/Grafana monitoring; collaborated through Git-based PR workflows in Agile sprints.
- Debugged and resolved production issues to maintain stable, reliable releases.

Backend Developer (Java) — Client: Roche

Estuate Inc.

May 2025 – Sept 2025

Bangalore, India

- Designed and developed a distributed Java microservices system for transferring, streaming, and archiving large-scale medical imaging (DICOM) data across AWS, Azure, and Google Cloud.
- Integrated AWS Health Imaging, Azure DICOM Services, and Google Cloud Healthcare API with S3, Blob Storage, and GCS to support multi-cloud interoperability.
- Built concurrent, multi-threaded data transfer pipelines in Java with Redis caching to improve throughput and performance for large medical imaging datasets.
- Developed comprehensive JUnit and Mockito test suites to ensure code reliability and catch regressions early in the development cycle.
- Deployed services via Docker and Kubernetes with GitHub Actions CI/CD pipelines and Prometheus/Grafana monitoring for production observability.

PROJECTS

Social Media Application with Real-Time Chat

Java, Spring Boot, JWT, MySQL, React, Redux, Tailwind CSS | 2022 – 2023

- Built a full-stack social media application with real-time chat functionality using Java, Spring Boot, and JWT-based authentication for the backend.
- Designed a MySQL relational database schema to support user profiles, posts, and real-time messaging.
- Developed a React/Redux frontend styled with Tailwind CSS, delivering a responsive, real-time user experience.

EDUCATION

B.E. in Computer Science

Sri Venkateshwara College of Engineering, VTU, Bangalore, Karnataka — 66.7%

Aug 2019 – Jun 2023
